Bachelor of Science in Chemistry

MODULE HANDBOOK

Module name:	Coordination Chemistry						
Module level, if applicable:	Undergraduate						
Code:	KMA 6408						
Sub-heading, if applicable:	-						
Classes, if applicable:	2						
Semester:	4 th						
Module coordinator:	Prof. AK. Prodjosantoso, Ph.D						
Lecturer(s):	1. Prof. KH. Sugiyarto, Ph.D 2. Prof. AK. Prodjosantoso, Ph.D 3. Isti Yunita, Ph. D						
Language:	Bahasa Indonesia and English						
Classification within the curriculum:	Compulsory Subject						
Teaching format / class hours per week during the semester:	<ul style="list-style-type: none"> • Lectures: 150 minutes lectures, 180 structured activities and 180 individual study per week • Laboratory work: 170 minutes includes the laboratory work and it's reporting per week 						
Workload:	Total workload of the activity is 181,33 hours per semester which consists of 150 minutes lectures, 180 structured activities and 180 individual study and also 170 minutes laboratory work with it's reporting per week for 16 weeks						
Credit points:	4 SKS (7 ECTS) with the details of 3 SKS (5 ECTS) lectures and 1 SKS (2 ECTS)						
Prerequisites course(s):	Metal Inorganic Chemistry						
Course Outcomes	<p>After taking this course, the students are expected to be able to:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 10%; text-align: center;">CO1</td> <td>Explain the application of Coordination Chemistry concept, including the history of the growth of Coordination Chemistry.</td> </tr> <tr> <td style="text-align: center;">CO2</td> <td>Explain the concept of Coordination Chemistry: boundary of transition elements, electron configurations, coordination numbers, molecular orbital diagrams.</td> </tr> <tr> <td style="text-align: center;">CO3</td> <td>Analyzing the application and innovation related with Coordination Chemistry.</td> </tr> </table>	CO1	Explain the application of Coordination Chemistry concept, including the history of the growth of Coordination Chemistry.	CO2	Explain the concept of Coordination Chemistry: boundary of transition elements, electron configurations, coordination numbers, molecular orbital diagrams.	CO3	Analyzing the application and innovation related with Coordination Chemistry.
CO1	Explain the application of Coordination Chemistry concept, including the history of the growth of Coordination Chemistry.						
CO2	Explain the concept of Coordination Chemistry: boundary of transition elements, electron configurations, coordination numbers, molecular orbital diagrams.						
CO3	Analyzing the application and innovation related with Coordination Chemistry.						
Content:	<ol style="list-style-type: none"> 1. Coordination chemistry theory explains the chemical transition elements, including the understanding of transition elements, the nature of transition elements, electronic configuration of transition elements, trends in periods and classes, catalytic properties of transition elements, magnetic properties of complex compounds, and term spectroscopy 2. Complex compounds: boundaries of complex compounds, formulations of complex compounds, bonds in complex 						

	<p>compounds, coordination numbers and spatial forms of complex compounds, complex compound formula writing, nomenclature of complex compounds, the development of the theory of complex compound formulations, isomers in complex compounds, metallocene and metal cluster, application of complex compounds.</p> <p>3. The development of the theory of bond formulations in complex compounds according to the Blomstrand-Jorgensen chain model, and Werner's model, geometric shapes, and isomers of complex compounds, the concept of effective atomic numbers, and valence bond theory (VBT), field theory crystals (CFT), dia- / para-magnetic, high- / low-spin magnetic properties, magnitude of orbital divisions d by the strength of the CFT model crystal field, molecular orbital theory (MOT); the magnetic properties of dia- / para- magnetic, high- / low-spin, and the level of covalence of the MOT model</p> <p>4. Thermodynamics and kinetics of complex compounds, stability and instability of complex compounds, thermodynamics of complex compounds, complex equilibrium constants in solutions, complex compound kinetics, complex reaction reaction mechanisms, reaction rates and electronic configurations, ligand substitution reactions, trans effects, redox reactions, and complex acid-base ion reactions</p> <p>5. Chemical group 3 elements, lantanoides, and actinoids</p>															
Study / exam achievements:	<p>Attitude assessment is carried out at each meeting by observation and/or self-assessment techniques using the assumption that basically every student has a good attitude. The student is marked very good or not good attitude if they show it significantly compared to other students in general. The result of attitude assessment is not taken into account in the final grades, but as one of the requirements to pass the course. Students will pass from this course if at least have a good attitude. The final mark will be weight as follow:</p> <table border="1"> <thead> <tr> <th>No</th> <th>CO</th> <th>Assessment Object</th> <th>Assessment Technique</th> <th>Weight</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>CO1, CO2, CO3</td> <td>a. Assignments b. Activity c. Final Exam d. Midterm Exam</td> <td>Presentation / written test</td> <td>20% 20% 30% 30%</td> </tr> <tr> <td colspan="4">Total</td> <td>100%</td> </tr> </tbody> </table>	No	CO	Assessment Object	Assessment Technique	Weight	1	CO1, CO2, CO3	a. Assignments b. Activity c. Final Exam d. Midterm Exam	Presentation / written test	20% 20% 30% 30%	Total				100%
No	CO	Assessment Object	Assessment Technique	Weight												
1	CO1, CO2, CO3	a. Assignments b. Activity c. Final Exam d. Midterm Exam	Presentation / written test	20% 20% 30% 30%												
Total				100%												
Forms of media:	Handout, Board, LCD Projector, Laptop/Computer, Module
